

PRESS RELEASE

AdRem Software Debuts at CeBIT Germany in Effort to Boost European Presence

NEW YORK, March 7, 2005 - AdRem Software, provider of network management solutions, announced it is going to exhibit its network management products at CeBIT (Hannover, Germany, 10-16 March, 2005) – Europe's largest event for information technology, telecommunications, software, and services. The company hopes to enhance its presence in Europe by showcasing the newly-released version 3.1 of its AdRem NetCrunch network monitoring solution. The latter targets small-to-medium size businesses that seek integrated cross-platform alternatives to narrow-focused point solutions.

AdRem's participation at the show will occur jointly with United Business Machines GmbH – the company's distributor in Germany and several other European countries. The event follows on the positive reception of NetCrunch's latest version in Europe. The solution is addressed to network professionals who want to visualize network structure and problems in real-time via the integrated discovery, monitoring, alerting and reporting technology. In addition to the platform-independent NetCrunch, the company will showcase its award-winning network management solutions designed specifically for the Novell NetWare network operating system – Server Manager and sfConsole.

Borys Skraba, AdRem's International Sales Manager, said, "CeBIT is not only a major European IT and telecoms trade show, but in fact it is the world's largest event in the industry. Because Europe has always been our critical market, we decided that a visit to Hannover is the right thing to do."

A CD with a 30-day fully functional version of NetCrunch 3.1 along with AdRem's Media Kit will be available at the company's booth #1, in Hall 1, 3rd Floor, Novell Partner Pavilion, Hannover Convention Center. Appointments for a product demonstration can be made at www.adremsoft.com/events/cebit2005.php

About AdRem NetCrunch

With AdRem NetCrunch, administrators of cross-platform networks can make more efficient use of their time, budget, and IT resources. The program automatically discovers the physical and logical network topologies, documents and displays network assets via dynamically updated graphical views, and starts proactive agentless monitoring of network devices, systems, services, and applications. In case of a network problem, AdRem NetCrunch can automatically take a corrective action or notify predefined user groups via email, pager, SMS, SNMP, syslog message or ICQ, providing necessary diagnostic information and tools. Additionally, users can analyze performance trends and receive scheduled reports - also via a web browser - that support informed network capacity planning. About AdRem Software

AdRem Software was founded in 1998 as a privately held corporation. The company provides rapidly-deployable software solutions for monitoring, managing, troubleshooting and securing enterprise networks. The company's products target small and mid-size organizations that seek more efficient and integrated alternatives to point solutions without the prohibitive costs traditionally associated with network management platforms. AdRem's solutions are sold through the corporate online store, resellers, distributors, and system integrators in more than 50 countries. More information at: www.adremsoft.com
