

**PRESS RELEASE**

**AdRem to showcase scalable and secure network monitoring  
at Interop New York 2005**

*AdRem's new NetCrunch 4 addresses challenges of agentless monitoring of multi-site TCP/IP networks by enhancing scalability and security.*

**NEW YORK, December 8, 2005** – AdRem Software, developer of network management solutions, will demonstrate the pre-release version 4 of its flagship NetCrunch monitoring solution at the upcoming Interop New York 2005 trade-show, December 13-15, 2005.

The new version of NetCrunch will offer more scalability and security while keeping the agentless monitoring approach. This will be possible through significantly improved program reliability and monitoring performance. NetCrunch will not only control its own monitoring traffic and performance, but will also tap into the power of multi-processor and multi-core systems. As a result, network administrators will be able to efficiently manage a larger number of hosts and network services.

Unlike other network monitoring solutions, NetCrunch 4 will be attractively licensed per administrator workstation, entitling the user to monitor practically an unlimited number of network hosts.

Other highlights of NetCrunch 4 will include:

- Enhanced network management security due to support for SNMP v.3 and policy-based access via the Web to network performance data
- Custom network performance reports

Borys Skraba, AdRem's International Sales Director, said: "Agentless monitoring is no longer limited to small networks. NetCrunch's scalability and responsiveness allows it to be successfully implemented in a typical mid-size TCP/IP networks. Larger IT shops can leverage our software to ensure that only authorized operators are able to manage the network in a way that reflects internal or regulatory requirements."

At booth #763, live solution demonstrations will be provided. The product is scheduled to ship January 2006, however, Interop visitors will receive fully functional 30-day trials of all of AdRem's network management solutions.

### **About AdRem NetCrunch**

First released in 2001, AdRem NetCrunch targets small and medium-sized businesses that seek affordable ways to realize IT operations cost-savings and optimize their multi-vendor networks. Using the program's integrated network discovery, agentless monitoring, alerting and reporting technology, IT professionals can visualize network infrastructure, address problems in real-time, and perform capacity planning. AdRem NetCrunch provides extensive monitoring of Windows, Linux/Unix and NetWare platforms, and SNMPv1/v2/v3 devices.

### **Pricing, licensing, and availability**

The AdRem NetCrunch network monitoring tool targets network administrators and managers, IT planners and consultants, VARs, system integrators, and network management service providers. The solution is available through AdRem Software channel partners, or direct sales force at [www.adremsoft.com/netcrunch/](http://www.adremsoft.com/netcrunch/) . The pricing for the current version 3.1 of the program's Premium Edition starts at \$1,695 (including 1 Year Standard Service Agreement), and for the Standard Edition at \$1,195. NetCrunch is licensed per number of management workstations. Volume, educational and government discounts are available.

## **About AdRem Software**

AdRem Software was founded in 1998 as a privately held corporation. The company provides rapidly-deployable software solutions for monitoring, managing, troubleshooting and securing enterprise and institutional networks. The company's products target small and mid-size organizations that seek more efficient and integrated alternatives to point solutions without the prohibitive costs traditionally associated with large network management platforms. AdRem's solutions are sold through the corporate online store, resellers, distributors, and system integrators in more than 50 countries.
